Backend Engineer · Distributed Systems · AI Pipelines · Node.js · Python · FastAPI

EDUCATION

G H Patel College of Engineering and Technology

June 2023 – May 2027

Bachelor of Technology in Information Technology (B.Tech IT)

Anand, Gujarat

- CGPA: 9.48 / 10

TECHNICAL SKILLS

Languages: JavaScript, TypeScript, Python, C++

Backend: Node.js, Express.js, FastAPI | REST APIs, WebSockets, gRPC

Databases: MongoDB, PostgreSQL, SQLite, Redis

ORM / ODM: Mongoose, Prisma, SQLAlchemy

Message & Task Queues: RabbitMQ, BullMQ, Celery

DevOps & Tools: Docker, Git, GitHub, Postman, Zod, PM2

INTERNSHIP EXPERIENCE

Prelax Infotech

May 2026 – June 2026

Backend Developer Intern | Project: Job Portal

Surat, Gujarat

- Architected a Node.js/Express microservice backend with 8 decoupled services, each owning its own PostgreSQL instance; internal communication via **gRPC** with an API Gateway handling centralized JWT validation.
- Implemented Auth, User, Job, Application, and Interview scheduling services; used **RabbitMQ topic exchange** for async event publishing (notifications, audit logs) and **Redis** for caching job listing queries.

Infosys Springboard (Virtual Internship)

Aug 2025 – Oct 2025

Python Developer Intern | Project: Crypto Portfolio Manager

Remote

- Built a **SQLite**-backed pipeline to ingest time-series crypto data (BTC, ETH, USDC); computed financial indicators via **Pandas/NumPy** and implemented portfolio strategies with **Ridge Regression** return prediction.
- Added risk monitoring with stress testing across bull, bear, and high-volatility markets; exposed the system via **FastAPI** with a **Streamlit** dashboard for visualization.

PROJECTS

Cadence — AI Meeting Platform | [GitHub](#) | [Live](#)

May – Present

Python, FastAPI, LiveKit, WebRTC, Socket.IO, Redis, PostgreSQL, Celery, Docker

- Built a real-time AI meeting backend (inspired by Otter.ai); **LiveKit** manages WebRTC rooms with a local **Silero VAD** model filtering silent audio chunks before transcription, reducing Groq Whisper API cost.
- Implemented a transcription pipeline using **Redis queues** to buffer speech chunks for **Groq Whisper**, streaming live segments to clients via **Redis Pub/Sub** and Socket.IO.
- Generated post-meeting summaries via **Groq LLaMA-3.3 70B** in Business and Interview modes, mapping action items to participant profiles; transcripts and summaries persisted to PostgreSQL.

Markivo — Multi-Vendor E-Commerce Platform | [GitHub](#) | [Live](#)

Mar – Apr 2026

TypeScript, Express.js, Zod, PostgreSQL, Prisma ORM, Redis, BullMQ, PM2

- Built a multi-vendor REST API backend with three user roles (Customer, Vendor, Delivery Partner), each with **role-based JWT auth** and isolated domain logic; implemented **Stripe checkout** with idempotency keys to prevent double-charging.
- Prevented overselling under concurrency via PostgreSQL **row-level locking** (`SELECT FOR UPDATE`); automated delivery assignment based on pincode and vendor load capacity.
- Offloaded emails and notifications to **BullMQ**; cached product search in Redis with TTL invalidation; deployed on Render with a PM2 ecosystem file managing server and worker processes.

SafeTrail — Smart Tourist Safety System | [GitHub](#) | [Live](#)

Jan – Feb 2026

Node.js, Express.js, MongoDB, Mongoose, Socket.IO, Ethers.js

- Engineered a background **Risk Engine** partitioning the map into grid cells, scoring each on incoming SOS alerts and crowdsourced incidents; computed tourist safety scores via **Haversine** distance and stepped time-decay.
- Built **itinerary-driven geofences** with TTL-based auto-expiry per destination; streamed real-time locations and SOS alerts via Socket.IO to a live authority dashboard.
- Enforced data privacy via **AES-256 encryption** and a blockchain audit trail on Polygon (Ethereum L2), storing Keccak-256 hashed event logs for tamper-proof records.

ACHIEVEMENTS

Secured **1st Rank in Class with 9.79 SGPA** — 5th Semester | G H Patel College of Engineering & Technology

2025
