SKILLS SUMMARY

- Languages:** Python, JavaScript, TypeScript
- Backend Engineering:** FastAPI, Node.js, Express.js, REST APIs, WebSockets, gRPC
- Databases & ORMs:** PostgreSQL, MongoDB, Redis, Prisma ORM, Mongoose, SQLAlchemy
- Queues & Async:** RabbitMQ, BullMQ, Celery
- Testing & Observability:** Jest, Supertest, K6, Pino
- DevOps & Infrastructure:** Docker, Git, GitHub Actions, Nginx, PM2

EDUCATION

G H Patel College of Engineering and Technology
Bachelor of Technology in Information Technology (B.Tech IT)

June 2023 – May 2027
 Anand, Gujarat

- CGPA:** 9.48 / 10

EXPERIENCE

Prelax Infotech
Backend Developer Intern | Project: Job Portal

Surat, Gujarat
 May 2026 – June 2026

- Architected a Node.js microservices backend using gRPC for inter-service communication and RabbitMQ for async event publishing covering notifications and audit logs.
- Implemented Redis caching for job queries and built an **AI company research** feature for candidates via Tavily web search, alongside a **resume parsing engine** to auto-fill profile details.

Infosys Springboard
Python Developer Intern | Project: Crypto Portfolio Manager

Remote
 Aug 2025 – Oct 2025

- Built a SQLite-backed pipeline to ingest time-series crypto data (BTC, ETH, USDC), computed financial indicators via Pandas/NumPy, and implemented portfolio strategies with **Ridge Regression** return prediction.
- Added risk monitoring with stress testing across bull, bear, and high-volatility markets; exposed the system via FastAPI with a Streamlit dashboard for visualization.

PROJECTS

Cadence – AI Meeting Platform
Python, FastAPI, LiveKit, WebRTC, Deepgram, Groq, Socket.IO, Redis, PostgreSQL, Celery, Docker

May – Present
[GitHub](#) | [Live](#)

- Built a real-time meeting transcription pipeline using **Deepgram Nova-2** that downsamples client-side audio from 48kHz Float32 to 16kHz Int16 PCM before streaming, cutting bandwidth by **83.3%** and enabling **sub-150ms** transcription latency via Redis Pub/Sub.
- Added a local **Silero VAD** model to discard low-confidence speech frames before they reached the transcription API, and moved post-meeting report generation off the REST gateway to direct database session transactions inside the worker – cutting retrieval time from **1.25s to 50ms** and total report generation time by **35%**, eliminating HTTP socket timeouts on cold starts.
- Designed a **leaky-bucket rate limiter** to pace openai/gpt-oss-120b (via Groq) summary generation calls and a resilient, non-blocking queue-polling loop to keep proxy connections alive, achieving a **100%** summary success rate with zero silent drops.

Markivo – Multi-Vendor E-Commerce Platform
TypeScript, Express.js, Zod, PostgreSQL, Prisma ORM, Redis, Stripe, BullMQ, PM2

Mar – Apr 2026
[GitHub](#) | [Live](#)

- Built a multi-vendor REST API with role-based JWT auth for customers, vendors, and delivery partners, integrated Stripe checkout with **idempotency keys** to prevent duplicate payments, and exposed dedicated dashboards for vendor inventory and delivery order management.
- Prevented overselling under concurrent checkouts using **database row-level locking** inside transactions, validated with load testing and race simulations showing **zero stock drift**.
- Added a TTL caching layer for the product catalog and offloaded emails and order updates to background workers, scaling read throughput from **199 to 565+ RPS** and cutting p95 latency from **871ms to 83ms**.

SafeTrail – Smart Tourist Safety System
Node.js, Express.js, MongoDB, Mongoose, Socket.IO, Ethers.js, Polygon

Jan – Feb 2026
[GitHub](#) | [Live](#)

- Built a tourist safety backend serving both a mobile app and an authority dashboard from a single Express server using **JWT role-based access**, with real-time SOS alerts and live location streaming to authorities via Socket.IO.
- Designed a **background risk engine** that scores geographic grid cells every 30 minutes using SOS alerts, crowdsourced incidents, and time-decay weighting, and auto-generates **TTL-bound geofences** from a tourist's itinerary that expire when the trip ends.
- Enforced tamper-proof audit logging by hashing SOS and registration events onto a Polygon L2 blockchain ledger, with tourist PII protected via **AES-256** encryption before storage.

ACHIEVEMENTS

- Selected as a Solo Finalist – Odoo Hackathon 2026:** Advanced to the final round in Gandhinagar (Sept 5–6, 2026), one of only 857 teams selected from 20,000+ applications, competing solo against teams of up to 4 members.
- Secured 1st Rank in Class** with 9.79 SGPA – 5th Semester, G H Patel College of Engineering & Technology (2025)
